Epidemiology Assignment

CHO 300 LEVEL

A susceptible host is an individual or organism that is more likely to contract an infection or disease due to various factors. These factors can include a weakened immune system, poor health, or lack of immunity to a particular pathogen.

In epidemiology, a susceptible host is typically someone who is vulnerable to infection because they haven't developed immunity or have a compromised defense mechanism  . This can be due to various reasons such as age, underlying medical conditions, or malnourished.

Control Measures.

- 1 Immunization eg Vaccination
- 2 Good personal hygiene
- 3 Avoid exposure to infectious agents
- 4 Use of protective equipment
- 5 Reduce exposure
- 6 Good nutrition
- 7 Protect of High risk groups
